### Response:

There were a lot of aspects of php that were new to me. For example, all the specific functions of arrays such as `array_reduce()` were foreign to me, and it was specifically with the arrays that I found a lot of new concepts. Overall, the rest of the concepts were familiar to me, such as having global variables and printing. I worked with global variables when studying python. All in all, everything I've read makes sense to me.
